User documentation

This documentation will guide you through the proper use of the application. Read this file thoroughly.

Functionality:

- Specifying competitions/activities names

- Recording the final results of 3 competitors

- Resetting the stopwatches back to default

- Watching the current local time

- Showing hints to users with glowing animation effects

- Simultaneous use of 3 stopwatches for every activity

✦ Users can use up to 3 stopwatches to simultaneously define the winners (3 people) of any activities or competitions. The current stopwatch, that users hovered over, will have a glowing animation effect. So, users know where they currently are.

✦ The first line below stopwatch buttons allows specifying an activity/competition name. When a start button is clicked, a stopwatch runs and shows the elapsed time. Users can't reset it unless all the winners are defined. So, users won't accidentally reset it. This prevents from data loss.

✦ In order to define a winner's time result, hit a stop button whenever they finish. The result will be automatically added

below an activity/competition name. The 1st result will be coloured as gold. The 2nd as silver. The 3rd as bronze.

⭐ While a stopwatch runs, a stop button will have a glowing animation effect around it. This is a hint for users, if they forget how to use the application.

⭐ When all the results are defined, a reset button will have a glowing animation effect around it. Start and stop buttons will disappear temporarily. This is another hint for users.

⭐ This application is already deployed and available to use via the link: https://sleeplessglory.github.io/competition-records
